

# EARLY LEARNING FACT SHEET

*Promoting early learning and development Birth to 8*

## Focus on Evidence-Based Family Home Visiting

Healthy brain development depends on attentive, nurturing caregiving in infancy and early childhood. Research shows that there is a negative impact on brain development when young children do not have consistent, supportive relationships with caregivers and are exposed to “toxic stress” associated with extreme poverty, family chaos, chronic neglect and/or abuse, severe maternal depression, parental substance abuse or repeated exposure to violence at home or in their communities. Persistently elevated levels of stress hormones in young children can lead to permanent changes in brain structure and lifelong impairments in learning, behavior, and health.<sup>1,2</sup>

Providing early and intensive support to families with multiple risk factors helps parents develop critical nurturing skills during the prenatal, infancy, and toddler periods and improves child development outcomes.<sup>3</sup> Evidence-based family home visiting programs that serve vulnerable pregnant women and families with young children are a proven strategy to improve long-term child and family outcomes.<sup>4</sup>

### Family Home Visiting

In 2010, federal legislation established the Maternal, Infant, and Early Childhood Home Visiting (MIECHV) program to help states implement voluntary evidence-based home visiting services for expecting and new parents. States are required to implement programs with strong scientific evidence that they improve maternal and child health outcomes, reduce child maltreatment, improve family economic security, and enhance children readiness for school.<sup>5,6</sup>

Rhode Island has received federal funding to implement Nurse-Family Partnership, Healthy Families America, Parents as Teachers, and Family Check-Up as evidence-based family home visiting programs.

#### FAMILIES ENROLLED IN EVIDENCE-BASED FAMILY HOME VISITING (MIECHV-FUNDED), RHODE ISLAND, 2010 – 2015

Source: Children's Friend and Service, Nurse-Family Partnership enrollment in October 2010 and October 2011. Rhode Island Department of Health, enrollment in MIECHV-funded evidence-based home visiting programs in October 2012, October 2013, October 2014, and September 2015.

In addition to the MIECHV-funded programs, the federal government funds Early Head Start to provide comprehensive services to low-income families with infants and toddlers and pregnant women. The home-based model of Early Head Start is recognized as an evidence-based family home visiting program.<sup>7</sup> In Rhode Island there were 376 families enrolled in home-based Early Head Start as of October 2014, up from 323 families enrolled in October 2010.<sup>8</sup>

Source: Rhode Island Department of Health, KIDSNET Database, Births to Rhode Island Residents, 2014. Notes: Core cities are Central Falls, Pawtucket, Providence, and Woonsocket. Low-income is measured by public health insurance at birth. RItE Care is available for pregnant women with incomes below 258% of the federal poverty level. In addition, there were 97 infants born to a mother without health insurance (1% of births statewide) in 2014.

# Evidence-Based Family Home Visiting Programs in Rhode Island

As of September 2015, Rhode Island has contracted spaces for 1,101 families to enroll in MIECHV-funded evidence-based home visiting programs, and there were 869 families enrolled (79% of slots were full).<sup>9</sup> Rhode Island has been rapidly expanding evidence-based home visiting programs and most programs are still ramping up enrollment to reach full capacity. The state has plans to implement the Family Check-Up model with MIECHV resources, but contracts are not yet in place so families have not begun to enroll in this program.

## CAPACITY AND ENROLLMENT IN EVIDENCE-BASED FAMILY HOME VISITING PROGRAMS, RHODE ISLAND, SEPTEMBER 2015

## Rhode Island Family Home Visiting Act

Introduced in 2015, the *Rhode Island Family Home Visiting Act* would codify key elements of the state's home visiting system into law, including requiring the Rhode Island Department of Health to work together with other state agencies to identify and offer vulnerable families the opportunity to enroll in evidence-based family home visiting programs.
